KINO DER TOTEN · LOCAL MODDING FORK

Kino Fork Roadmap

Seven phases that add pistol-only starts with a custom Mystery Box, Gobblegums, class depth, weapon and player prestige, perk and ammo mod augments with a research panel, a credits shop, and a seasonal battle pass.

Updated Oct 14, 2026 · Version 2 · Phases are ordered, not dated · The one-page overview is `kino-fork-roadmap.png`

1	**Pistol loadouts**	Pistol-only starting slots and a custom Mystery Box list you build in the Loadout pane.	Moon uses the list; the card works by touch	PLANNED
2	**Gobblegums**	BO6/BO7-style packs, a three-gum hand, a free gum machine, eight starter gums.	Gums unlock from play; the hand works by touch	PLANNED
3	**Class depth**	Class meter, augment synergies, sidearm passives and either-or nodes.	All six skills run clean in the Sandbox	PLANNED
4	**Prestige and camos**	Weapon prestige (two tiers and Master) and player prestige. Three unique camos per gun, usable on every gun.	A camo won on one gun paints another	NEW
5	**Augments and research**	A research panel and Major/Minor augments for perks and ammo mods. Four ammo mods are built first.	Finish a research, equip it, see it in a match	NEW
6	**Credits and shop**	A credits wallet and a Shop on its own page with seven cosmetic categories and rotating offers.	Buy, reload, still owned	NEW
7	**Battle pass**	A Marvel Rivals-style seasonal pass on its own page, with free and premium tracks.	Claim a tier on both tracks	NEW

THE RULE BEHIND THE SHOP AND PASS

The shop sells looks and sounds, never power. Power comes from play: levels, prestige, gums and research. The pass can speed progress with XP tokens, but it does not sell power either.

Contents

Where the code stands today
Phase 1 · Pistol loadouts
Phase 2 · Gobblegums
Phase 3 · Class depth
Phase 4 · Prestige and camos
Phase 5 · Augments and research
Phase 6 · Credits and shop
Phase 7 · Battle pass
What you can unlock, and where from
Cross-cutting concerns
Open questions (23)
Sources and caveats

STARTING POINT

Where the code stands today

All seven phases extend systems the fork already has, so most of the work is changing rules and data. The exceptions are the ammo mods (Phase 5) and the two new pages (Shop and Pass).

System	How it works now	Used by
Profile and loadout	`kino.mods.progression` holds xp, level, loadout, character and stats (`profile.js`). The menu picker only lists weapons named in `mods/progression/progression.json`, grouped into class tabs with unlock levels (`home.js`).	1, 4
Mystery Box	Upstream `mystery-box.js` with local edits: cached display copies and a `warm()` that preloads every box weapon's textures. The CoD Online mod guns and the DG-2 are already in the box.	1
Weapon levels, attachments, camos	Per gun (`weapon-levels.md`). Six camos per gun with per-gun challenges, a gold `mastery` camo, `applyCamo` painting any camo id on any gun, saved in `profile.camo`.	1, 4
Classes	`export/web/mods/classes/`: data in `classes.json`, rules in `classes.js`, hooks in `mod.js`, skills in `engineer.js` and `fortifier.js`. Own storage key `kino.mods.classes`. Two classes, three action skills each, 17-node trees (12 passives, 4 augments, 1 capstone).	3
Perks	Four drinkable perks in `game-data.json` (`perkDrinks`): Quick Revive, Speed Cola, Double Tap, Juggernog. Perks held in `session.perks` (`rules.js`). Deep Pockets and Iron Skin come from the progression mod's data.	5
Ammo mods	**None exist.** Pack-a-Punch exists (`pap-knuckles`, `pap-sound`), which is where an ammo mod would be applied.	5
Cosmetics that exist	Characters registry (`characters.json`) with third person, first-person arms and HUD portrait; six placeholder camos; `hud.css`; synthesised hit sounds; the fx mod (colour-matched effects); music toggle; box map bulbs and other lighting-mod fixtures.	6, 7
Menu	One Armory tab with Loadout, Classes and Operator panes (`core.md`). Shop and Pass will be separate pages, not Armory panes.	All

NAMING

The class trees already call their upgrade nodes "augments" (`classes.md`). The new Phase 5 system is labelled **perk augments** and **ammo mod augments** in the UI and lives in its own mod (`research`), so the two never share a code path.

PHASE 1 · PLANNED

Pistol loadouts and a custom Mystery Box list

Two rules change in the progression mod: you can only start with pistols, and the Loadout pane becomes where you choose which other guns the Mystery Box can give you.

Design

- **Starting slots.** `applyLoadout()` in `mods/progression/mod.js` builds the inventory from `loadout.primary` and `loadout.secondary` on every reset. Restrict both to the Pistols class (`weaponClass` and `CLASSES` in `mods/weapon-levels/camo.js`), enforced in `validLoadout` (`profile.js`). A saved profile with an SMG primary falls back to the M1911 instead of breaking.
- **Box list.** A new `loadout.box` array of weapon ids in the profile, trimmed by `validLoadout` to guns you have unlocked. Unlock levels in `progression.json` still decide what can be added.
- **Pool.** `MysteryBox.start()` already builds its pool from `data.boxPool` and removes guns you own. Add one step that keeps only guns on your list.
- **Menu.** Primary and Secondary cards show pistols only. A new Mystery Box card sits in the Loadout pane with an on/off toggle per gun, select-all or clear per class tab, and a count.

Milestones

1. Pistol-only slots and the picker filter.
   Gate · A profile saved with an SMG primary starts a new game with the M1911.
2. Box list in the profile and the `start()` filter.
   Gate · With a short list, every roll comes from that list.
3. Mystery Box card in the Loadout pane.
   Gate · Toggles survive a reload.
4. Moon, custom maps and phone layout.
   Gate · The list applies on Moon (`moon-features.js` builds its own box) and the card works by touch.

Risks

- **Empty pool.** If `start()` finds no gun it returns false and the box will not open. The list needs a minimum size, with the remove toggle disabled at the floor.
- **Harder early game.** Pistol-only starts change the power curve that Deep Pockets, Iron Skin and the class skills were tuned against. Rebalance after the change, not before.
- **Co-op.** The host owns the box location, but each client calls `start()` itself. Confirm where the roll is made before promising per-player lists.
- **Save safety.** The new field goes through the same storage-first save as `weaponXp`, `attachments` and `camo`.

Files: `profile.js`, `mods/progression/mod.js`, `mystery-box.js`, `moon-features.js`, `home.js`, then `docs/fork/core.md` and `history.md`.

PHASE 2 · PLANNED

Gobblegums

A BO6/BO7-style system: you build a pack in the menu, start a match holding three gums, and collect more from a free machine in the map. The rules below come from Activision's BO6 and BO7 guides, which agree with each other.

BO6/BO7 rule	Fork version
Build packs in the Loadout menu; a match needs one equipped	New Gobblegums pane in the Armory; a pack is an ordered list of gums
The first three gums in the pack are your starting gums	Same
You hold at most three gums	Same, shown as three HUD slots
A free machine gives one gum from your pack that you don't hold	A placed machine prop with a free Use prompt
An out-of-stock gum gives a flavorless Mr. Peeks gum	Same
Chew a gum to use it: Instant, Timed or Conditional	One key chews the selected gum; a second cycles slots
Rarity: Ultra, Legendary, Epic, Rare, plus cosmetic Whimsical	Same five tiers, Whimsical added last
Earned by playing	Unlocks tied to progression levels
Switch packs mid-match from the pause menu	Add to `game-menu.js`

Neither guide states a pack size or a per-match use limit, so both are open decisions.

Starter set

Eight gums, each built on a hook the engine already has. Rarity and type follow the games.

Gum	Rarity	Type	Effect	Built on
Kill Joy	Rare	Instant	Drops an Insta-Kill power-up	`powerups.spawn`
Who's Keeping Score?	Epic	Instant	Drops a Double Points power-up	`powerups.spawn`
Gift Card	Ultra	Instant	Grants a lump of points (the games give 30,000; set your own)	`session.addPoints`
Idle Eyes	Legendary	Timed, 30 s	Zombies stand idle	`enemies` targeting; the classes mod already wraps `enemies.lureTarget`

Soda Fountain	Epic	Conditional	Next perk purchase adds a random extra perk	`session.perks`, `perkPrompt` in `engine.js`
Crate Power	Legendary	Conditional	Next Mystery Box weapon comes Pack-a-Punched	`MysteryBox.take()`
Wall Power	Legendary	Conditional	Next wall-weapon purchase comes Pack-a-Punched	`wallPrompt` in `engine.js`
Time Out	Ultra	Timed, 3 min	Clears the zombies on the map	`enemies.list`, `enemies.hurt`

Milestones

1. Data and profile: `mods/gobblegums/` with `gums.json` and its own storage key `kino.mods.gobblegums` (packs, active pack, owned gums), cloud-synced like the classes mod.
   Gate · A pack survives a reload, and a progression save never touches it.
2. In-match core: three-slot hand, chew key, HUD slots coloured by rarity, and the three Instant gums.
   Gate · A new game starts with the pack's first three, and chewing Kill Joy drops an Insta-Kill.
3. Timed and Conditional types with the other five starter gums.
   Gate · Crate Power makes the next box weapon Pack-a-Punched, then reverts.
4. Gum machine: a prop with a free Use prompt, a gum you don't hold, Mr. Peeks when stock runs out.
   Gate · It works on Kino.
5. Menu: Gobblegums pane (pack builder, rarity filter, locked gums) and the pause-menu pack switch.
   Gate · Switching packs mid-match changes what the machine gives.
6. Earn path, Whimsical gums, Moon and custom maps, phone layout.
   Gate · Gums unlock from play, and the hand works by touch.

Risks

- **No Use hook for mods.** `findPrompt()` in `engine.js` asks the map for prompts and has no mod hook, so the machine needs a small engine edit. Add it to the upstream-edits list in `CLAUDE.md`.
- **Co-op.** The host runs zombies and rounds, so Time Out and Idle Eyes must run there. Power-ups already have a `snapshot()`, so Kill Joy should sync. Hands and packs stay per player.
- **Balance.** Ultra gums can end a round on their own. Stock per gum is the real limit, and it interacts with the harder starts from Phase 1.
- **Box gums and Phase 1.** Any gum that re-rolls or upgrades box weapons must use the player's filtered box list.
- **Unchecked hooks.** Soda Fountain, Wall Power and Crate Power need a look at the perk and Pack-a-Punch purchase paths before they are promised.

Files: new `mods/gobblegums/` (`mod.json`, `mod.js`, `gums.json`, pane code), then `engine.js`, `home.html`, `home.js`, `game-menu.js`, `cloud.js`, plus docs.

PHASE 3 · PLANNED

Class depth

Phase 3 keeps the two classes and their six skills, and adds four small systems that give each class more to decide and react to during a match. Everything is data-first: new fields in `classes.json`, rules in `classes.js`, one shared runtime piece in `mod.js`. Because the passives are generic stats, each addition works for every skill and for any class added later.

Addition	What the player sees	Lands in
Class meter	A ring on the HUD skill hex fills as you play. When it is full, your next activation skips its cooldown.	`mod.js`, `engineer.js`, `fortifier.js`, HUD
Augment synergies	Two specific equipped augments from the same tree light up a link and grant a bonus stat.	`classes.json`, `classes.js`, `tree-view.js`
Sidearm passives	A few passives that only apply while a pistol is in hand, which rewards the pistol-only starts from Phase 1.	`classes.json`, `mod.js`
Either-or nodes	One pair of passives per tree where taking one locks the other, so two builds of the same tree differ.	`classes.json`, `classes.js`, `tree-view.js`

How the meter differs by class. The payoff is shared and cheap: it reuses `startCooldown` in `mod.js`, the same path Salvage uses. The fill differs. The Engineer fills it from damage its skills deal, through `onHit(z,killed)`, which every skill already calls. The Fortifier fills it from hits its fortification absorbs, through a new hook in `fortifier.js`. One class rewards killing, the other rewards holding.

Dependency: only the sidearm passives need Phase 1. The other three additions can move earlier if you want a quick win.

Milestones

1. Data model: `synergies` and `exclusive` groups in `classes.json`, with rules in `classes.js` (`canAdd`, `stats()`).
   Gate · An old profile loads, refunds any stranded points and shows no errors, using the same Node checks as the earlier class changes.
2. Sidearm passives.
   Gate · A sidearm passive applies with a pistol in hand and drops off when the slot changes.
3. Class meter: shared fill and payoff in `mod.js`, class fills in the two skill files, ring on the HUD hex.
   Gate · A full meter makes exactly one activation free, then empties.
4. Menu: synergy links, either-or markers and the meter in the action card (`tree-view.js`).
   Gate · All three read correctly on desktop and phone.
5. Balance pass: run all six skills in the Sandbox with the new systems on.
   Gate · No errors, and no skill is on permanent free cooldown.

Risks

- **Save migration.** `loadClassProfile` refunds points in nodes that change, so add nodes rather than renaming existing ones.

- **Moon.** Moon's world adapter has no `dynamic` list, so the Fortifier wall does not block the player there. Fortifier meter fills that depend on held zombies need a check on Moon.
- **Scope creep.** "Light" means these four. A third class, a new action skill or a prestige layer belongs in a later roadmap.
- **Co-op.** The class notes do not cover how skills behave in co-op, so check before the meter payoff ships.

Files: `classes.json`, `classes.js`, `mod.js`, `engineer.js`, `fortifier.js`, `tree-view.js`, then `docs/fork/classes.md` and `history.md`.

PHASE 4 · NEW

Prestige and unlockable camos

Modelled on Black Ops 7. Each gun prestiges on its own and has **three** unique camos: one for Prestige 1, one for Prestige 2 and one for Prestige Master. Once earned, a camo works on every gun. The account prestiges separately.

Level 1–50	Prestige 1	Prestige 2	Prestige Master
normal levels	gun resets · camo 1	gun resets · camo 2	to level 250 · camo 3

Weapon prestige ladder, per gun. BO7 runs two prestige routes of 50 levels, then Master with 250 levels.

HOW BO7 DOES IT

- Entering a prestige tier resets the weapon to level 1 and clears its attachment unlocks.
- Camos and optics stay.
- Each step grants a unique camo and a weapon-specific charm, plus an attachment.
- Account prestige comes at level 55 and gives an icon and a permanent unlock token.

WHAT THE FORK DOES

- Same ladder per gun, with three prestige camos.
- Earned camos join a **global** list that the Gunsmith offers on every gun.
- Player prestige gives a badge and an unlock token.
- Weapon charms are a later add-on (see Phase 6).

Design

- **Per-gun state.** `prestige.weapons[id] = {tier, level, xp}`. A tier-up resets level and attachments through the existing weapon-levels functions. Camo progress in `profile.camo` is left alone.
- **Unique camos.** Each gun has three entries in `camos.json` flagged `prestige: true` with an `owner` weapon id and a `tier` (1, 2, Master). Textures follow the existing format (`texture`, `scale`, `mix`, `metal`). Procedural placeholders come first, generated from a per-gun seed and the tier.
- **Usable everywhere.** `applyCamo(root, camo)` already paints any camo id on any gun. "Usable on every gun" is a change to the Gunsmith camo row, which today lists only that gun's own six camos. It will also list the global prestige list.
- **Player prestige.** At the max player level you prestige for a badge and a permanent unlock token. Player prestige keeps unlocks (see the risk below), so the token is a cosmetic or convenience reward.
- **Storage.** A new key `kino.mods.prestige` holds player prestige, weapon prestige and the earned camo list. It is cloud-synced.

Milestones

1. Weapon prestige state and the reset rules.
   Gate · Prestiging a gun keeps its camos and resets its level and attachments.
2. Global camo list and the Gunsmith row.
   Gate · A camo earned on one gun paints another gun in the Gunsmith preview and in play.

3. Camo art: procedural placeholders for every gun, real textures later.
   Gate · Every gun shows three prestige camos.
4. Player prestige, badge and menu panes (phone too).
   Gate · A player prestige keeps every unlocked gun.

Risks

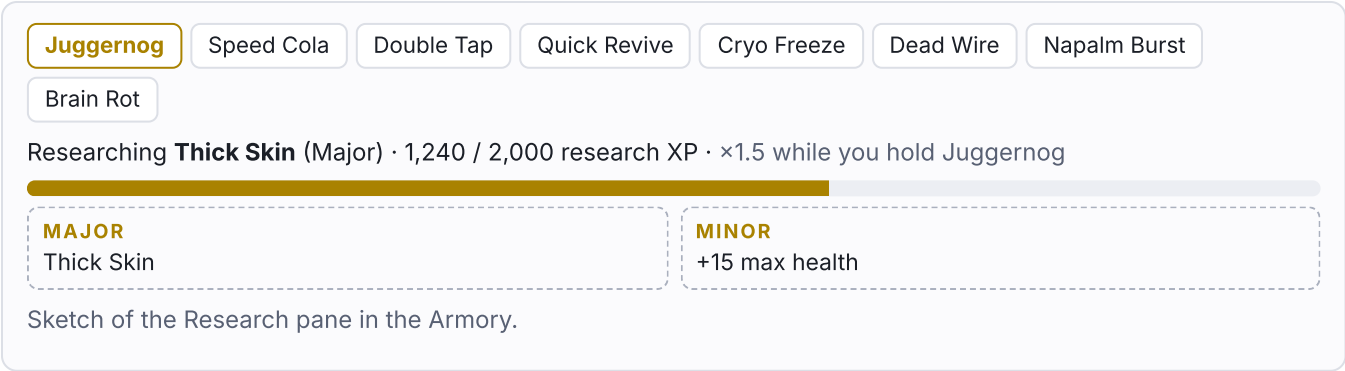

- **Re-locking guns.** Player prestige must not re-lock guns. Phase 1's `validLoadout` trims the box list to unlocked guns, so a reset that re-locks weapons would shrink the list.
- **Art volume.** Three camos per gun across every BO1, CoD Online, BO3 and wonder weapon is a lot of art. Generate placeholders from a per-gun seed and tier.
- **Save safety.** The new data is read from storage first, like `weaponXp`, `attachments` and `camo`.
- **Gold camo.** The existing `mastery` camo stays as it is. Prestige camos are separate.
- **Wonder weapons.** The DG-2 and similar guns have no attachments, so the "clears attachments" step is a no-op for them.

Files: new `mods/prestige/`, then `mods/weapon-levels/` (level reset), `camo.js` and `camos.json`, the Gunsmith view, `home.js`, `cloud.js`, plus `docs/fork/weapon-levels.md` and `history.md`.

PHASE 5 · NEW

Augments and the research panel

Modelled on Black Ops 6 Zombies. Each perk and ammo mod has Major and Minor augments. You research them one at a time in a panel, then equip one Major and one Minor per item.

Sketch of the Research pane in the Armory.

HOW BO6 DOES IT

- Augments open at level 11.
- Research one item at a time, across perks, ammo mods and field upgrades together.
- Research progresses on XP earned in Zombies, and faster when you use the item.
- You can equip one Major and one Minor augment per item.

WHAT THE FORK DOES

- Same rules for the four drinkable perks and four new ammo mods.
- A Research pane in the Armory next to Loadout, Classes and Operator.
- Research XP and progress live in their own store.
- Field upgrades are out of scope: the class action skills already fill that role.

Ammo mods come first

Kino has no ammo mods, so Phase 5 builds four small ones before their augments. Each is chosen when you Pack-a-Punch a gun and rides on a hook the engine already has.

Ammo mod	Effect	Built on
Cryo Freeze	Hits build up a slow, then freeze the zombie briefly	`enemies` speed multiplier
Dead Wire	Hits arc to nearby zombies	`enemies.hurt`, the fx mod's lightning
Napalm Burst	Hits set zombies burning; a burning kill bursts	`enemies.hurt`, the fx mod
Brain Rot	Hits confuse a zombie so it attacks others	`enemies` targeting (`lureTarget`, already wrapped by the classes mod)

Augment catalogue (placeholders to tune)

Eight items with two Major and two Minor augments each makes 32 augments. Names and numbers are first drafts.

Item	Major augments	Minor augments
Juggernog	**Thick Skin**: the first hit each round deals half damage. **Second Wind**: health regenerates faster after 3 s without damage.	+15 max health. Less hit knockback.
Speed Cola	**Hot Swap**: faster weapon swap and Pack-a-Punch raise. **Quick Mag**: a kill during a reload shortens it.	+10% reload speed. +5% move speed while reloading.
Double Tap	**Hollow Points**: extra headshot damage. **Hair Trigger**: a higher fire rate with a little more spread.	−10% recoil. +5% bullet damage.
Quick Revive	**Second Chance**: a self-revive grants 3 s of invulnerability. **Medic**: revive teammates faster (co-op).	Revive with +25% health. +5 s bleed-out time.
Cryo Freeze	**Shatter**: frozen zombies take extra damage and burst into shards. **Deep Freeze**: a longer freeze.	Faster slow build-up. A wider slow.
Dead Wire	**Chain Reaction**: arcs jump to extra zombies. **Overload**: arc damage grows with the zombies nearby.	Longer arc range. A higher arc chance.
Napalm Burst	**Wildfire**: burning zombies ignite their neighbours. **Slow Burn**: a longer burn.	More burn damage. A larger burst radius.
Brain Rot	**Mind Control**: confused zombies draw others for longer. **Infection**: a confused kill confuses neighbours.	A longer confusion. A higher confusion chance.

Research rules (placeholders)

- **One research at a time** across all eight items. Starting another pauses the first and keeps its progress.
- **Cost.** About 1,000 research XP per Minor and 2,000 per Major.
- **XP source.** Kills and rounds survived, with ×1.5 while the item is active: the perk is owned, or the ammo mod is on the gun in your hand.
- **Equip.** One Major and one Minor per item, set in the Research pane and shown on the pause menu. Augments are locked in at match start so a match is predictable.
- **Unlock level.** BO6 opens augments at level 11. The fork's level curve is its own, so this is an open question.

Milestones

1. Data and store: `mods/research/` with `research.json` and its own key `kino.mods.research`.
   Gate · Research progress survives a reload, and a progression save never touches it.
2. Research engine: XP accrual, one active research, completion toast.
   Gate · A research finishes after the right XP and the augment unlocks.
3. Perk augments for the four perks, applied through `session.perks` and the stat hooks.
   Gate · With Thick Skin equipped, the first hit of a round deals half damage.

4. The four ammo mods, chosen at Pack-a-Punch.
   Gate · Each mod does its effect on zombies in a headless Sandbox run, with no errors.
5. Ammo mod augments.
   Gate · An equipped Major and Minor change a mod's behaviour in a match.
6. Research pane (desktop and phone), pause-menu view, HUD toast.
   Gate · The pane reads correctly by touch.
7. Balance pass against the Phase 1 starts and the class skills.
   Gate · No augment makes an early round trivial.

Risks

- **Ammo mods are new content.** Four mods are the biggest cost in this phase. Ship the perk augments first if time is short.
- **Naming.** Class trees already use "augment". The UI says "perk augments" and "ammo mod augments".
- **Power curve.** Augments stack on top of Phase 1's harder starts, Phase 2's gums and Phase 3's class meter. Balance them together.
- **Moon.** Moon has its own box and equipment code (`moon-features.js`). Check its perk and Pack-a-Punch paths before promising augments there.
- **Co-op.** Effects that touch enemies (Brain Rot, Dead Wire) run on the host. Equipped augments stay per player.

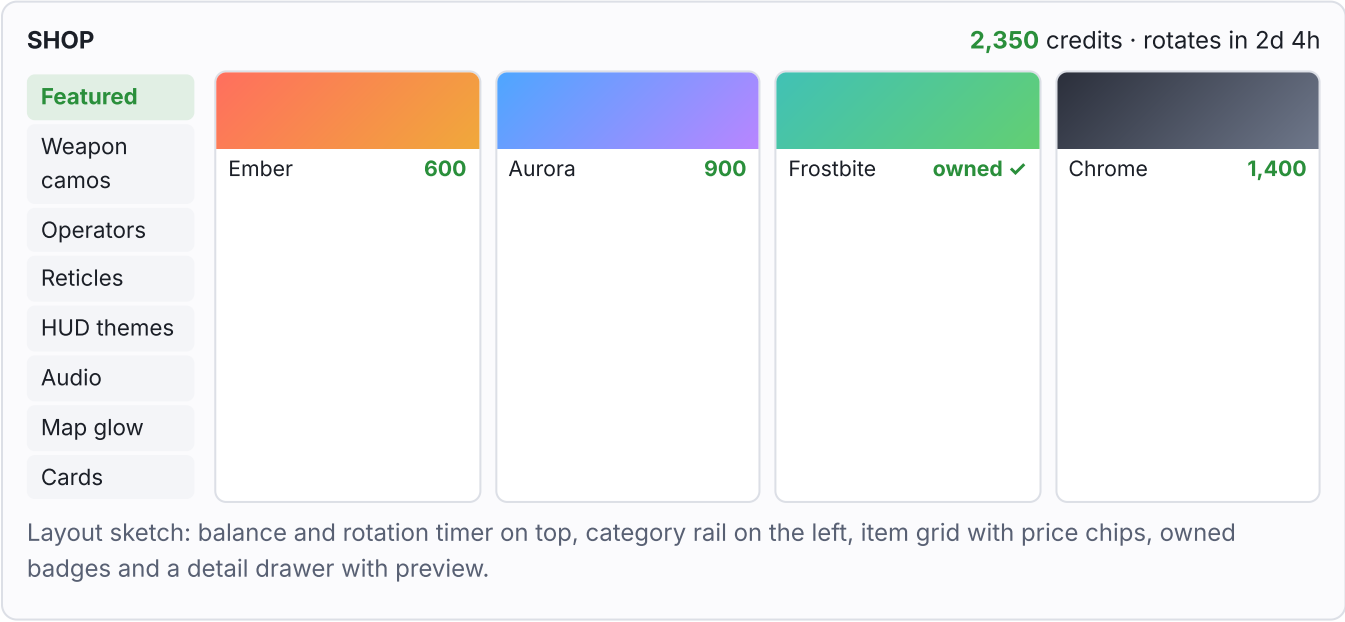

Files: new `mods/research/` (`mod.json`, `mod.js`, `research.json`, `ammo-mods.js`, pane code), then `rules.js` or a mod hook for perk stats, the Pack-a-Punch path in `engine.js`, `home.html`, `home.js`, `game-menu.js`, `cloud.js`, plus a new `docs/fork/research.md`.

PHASE 6 · NEW

Credits and the Shop

A single play-earned currency, **credits**, and a Shop on **its own page** (`shop.html`), reached from the main menu rather than from the Armory. The shop sells looks and sounds, never power.

The Shop page

Layout sketch: balance and rotation timer on top, category rail on the left, item grid with price chips, owned badges and a detail drawer with preview.

- **Entry.** A top-level Shop button on the main menu next to the Armory (`core.md`, `home.html`). The page is separate (`shop.html` and `shop.js`) and shares the menu's styles.
- **Preview.** Camos preview on the 3D gun with the Gunsmith's preview code. Operators reuse the Character tab's Body / First person preview. Reticles and HUD themes preview on a mock HUD. Audio plays a sample.
- **Buy flow.** Select, preview, Buy, confirm. The price is taken once; the item becomes owned immediately and gets an Equip button.
- **Equip lives in two places.** The Shop page and the matching Armory picker (camos in the Gunsmith, operators in the Operator pane). Both read the same owned list.
- **Rotation.** Three daily slots, one weekly featured bundle, one seasonal set tied to the battle pass theme, plus an always-available catalogue. Owned items never leave.
- **Phone.** A single column with a category dropdown and a bottom sheet for the item drawer (`mobile.md`).

What the shop can sell

Seven categories ship with the phase. Each one lists how it plugs into code that already exists. Prices are placeholders on a four-tier scale: Common 100–300, Rare 400–700, Epic 800–1,400, Legendary 1,500–

2,500 credits.

Category	What it is	Plugs into	Price
1 · Weapon camos	Shop camos for any gun: patterns (Ember, Aurora, Frostbite, Circuit, Digital Rain), metal finishes (Chrome, Brushed Steel) and animated finishes (a slow hue shift or pulse). They go into the same global list as prestige camos.	`camos.json` (`texture`, `scale`, `mix`, `metal`); `applyCamo`; Gunsmith camo row	300–1,200
2 · Operators and outfits	Full operators and outfit variants of existing characters (a re-tint or material swap). First-person arms and the HUD portrait come with them.	`characters.json` entries (`fpArms`, `handsTint`); `renderPortrait`; Operator pane	Operators 1,500–2,500; outfits 600–900
3 · Reticles, hitmarkers, kill effects	Crosshair and red-dot shapes and colours, hitmarker styles, and kill-effect colours.	`#reflex-dot` in the HUD; the combat feedback code in `mods/hud`; the fx mod's `effect` event	100–400
4 · HUD and menu themes	Round counter styles (tally marks or numerals, blood colour), perk icon sets, portrait frames, menu backgrounds and accent colours.	`hud.css`; the Gobblegum HUD slots (Phase 2); menu CSS	400–900
5 · Music and sound sets	Ambient music packs, hit-sound sets (parameter sets for the synthesised thumps) and an announcer voice set.	`settings.music` and `audio.playMusic`; `mods/hud` combat feedback	300–800
6 · Map glow	Colours for the Mystery Box bulbs, the Pack-a-Punch machine glow, the teleporter beams and the Gobblegum machine skin.	The lighting mod's box bulbs (`lighting.md`); runtime colour changes, not a rebake	300–700
7 · Calling cards and frames	Emblem and card layers shown in the co-op lobby and pause screen. Prestige badges are earned and are not sold.	Co-op lobby (`coop.md`); profile display	100–500

Later additions, not in the phase: weapon charms (small models on the gun, like BO7's, which need per-gun attachment points), bundles that mix categories, and optional XP boosts. Boosts are an open question because they change how fast power arrives.

> **Art and rights.** Camos, music and operators must be the user's own or user-supplied. Imported models keep their licence file and a line in `CREDITS.md`. Ripped game assets are never published.

Where credits come from

You said you are unsure how to earn credits. These are candidates with rough sizes, so the choice can be made with numbers on the table. Every payout is a placeholder.

Source	How it works	Placeholder size
End-of-match payout *(recommended base)*	Rounds survived above round 5, plus kills, shown on the game-over screen. Capped per match.	~150 for an average match; cap 400
Daily and weekly challenges	Three daily and three weekly goals ("10 headshots with a pistol", "reach round 15"). They also feed pass XP in Phase 7.	75 each daily; 200 each weekly
First-time milestones	The first time you reach round 10, 20, 30 and 50 on a map; the first Easter egg completion.	100 / 250 / 500 / 1,000; egg 1,000
Prestige	Weapon Prestige 1, Prestige 2 and Master; player prestige (Phase 4).	300 / 500 / 1,000; player 1,000
Pass rewards	Credits on both tracks, plus a partial refund of the premium price on completion (Phase 7).	25–100 per tier

At those sizes an average match is worth about 150 credits, so an Epic camo is roughly six to nine matches. The earn rate against prices is the main balance lever.

Storage, anti-abuse and the reward registry

- **Stores.** `kino.mods.credits` holds the balance, a short ledger of the last 50 changes and daily and weekly challenge state. `kino.mods.shop` holds owned item ids, equipped items per category and a "seen" list for NEW badges. Both go in `TRACKED` in `cloud.js`.
- **Cheats.** Credits are only earned when no cheat was used in the match, the same rule as the best-round check (`cheats` mod). There are no payouts in the Sandbox or custom-map test mode.
- **Editable balance.** A client-side balance can be edited. That is accepted for a local fork. The ledger makes odd jumps visible.
- **Co-op.** The host's round count drives payouts and each player is paid once per match from their own kills.
- **Reward registry.** This phase adds one function, `window.kino.rewards.grant(type, id)`, that every reward source calls: shop purchases, prestige camos and the battle pass. It keeps the pass from needing a second code path for each item type.

Milestones

1. Wallet store, balance on the HUD and menu, ledger.
   Gate · A balance survives a reload.
2. Earn rules and the match payout on the game-over screen.
   Gate · No credits are earned in a match where a cheat was used.
3. Catalogue data (`mods/shop/catalog.json`), the Shop page shell, the buy flow and the reward registry.
   Gate · Buy an item, reload, and it is still owned.
4. Categories 1–3 with previews and equip hooks (camos, operators, reticles).
   Gate · A bought camo appears in the Gunsmith on every gun.

5 Categories 4–7 (HUD themes, audio, map glow, cards).
Gate · Each category applies in a match and survives a reload.

6 Rotation (daily, weekly, seasonal), bundles, phone layout, cloud sync.
Gate · The page reads correctly by touch and the rotation changes on the timer.

Risks

- **Day-one stock.** The shop needs real items the day it opens. Camos and reticles are the cheapest to make, so ship categories 1–3 first.
- **Lighting.** Map glow must change colour at runtime. Never toggle a light's `.visible`, and a baked change would force a rebake.
- **Textures.** Don't upload every camo's textures up front. Preload only the ones in the preview.
- **Pay-to-win.** Keep power out of the shop. XP boosts are the only grey area and are an open question.
- **Co-op.** Other players see your camo and operator, so equipped cosmetics must ride in the existing pose and profile messages (`coop.md`).

Files: new `shop.html`, `shop.js`, `mods/credits/` and `mods/shop/` (`catalog.json`, `mod.js`), then the main menu (`core.md`), `cloud.js`, a game-over payout hook in `engine.js`, plus a new `docs/fork/shop.md`.

PHASE 7 · NEW

Battle pass

A seasonal pass in the style of Marvel Rivals, on **its own page** (`pass.html`). A free track and a premium track run side by side. Premium is unlocked with credits, and individual tiers can be skipped with credits.

How the pass works

SEASON 1 · EMBER Tier 14 · 41 days left · **Claim all**

	1	5	10	15	20	25	30	40	45	50
Free	25 cr	Gum	**Camo**	Card	XP	Gum	75 cr	Charm	Gum	**100 cr**
Premium	Gum	Theme	**Camo**	Glow	Music	**Outfit**	Camo	Frame	XP	**Operator**

Sketch of the Pass page. Tiers scroll sideways on a phone.

- **Seasons.** Each season has a name, a colour theme, a start and an end, and 50 tiers plus the final grand prize. When the season ends the track archives and a new one starts. Owned items stay.
- **Pass XP.** Separate from player level. It comes from matches (rounds survived, kills) and from the daily and weekly challenges that also pay credits in Phase 6. About 1,000 XP per tier is a starting figure.
- **Premium.** Bought with credits (about 1,000). Premium rewards unlock for every tier already reached. Finishing the pass returns part of the price in credits, so a completed pass funds most of the next one. That refund is how I understand Marvel Rivals' pass works; check it against the game before relying on it.
- **Tier skips.** Buy the next tier with credits (about 150 each). It spends credits once and grants both tracks' rewards for that tier.
- **Claiming.** Rewards are claimed on the Pass page, individually or with Claim all. Rewards earned but unclaimed at season end stay claimable (open question).
- **Exclusive items.** Pass items are tagged to their season. Whether they return to the shop later is an open question.

What the pass can unlock

FREE TRACK · ABOUT 40% OF THE REWARDS

- Credits (25–100 per tier)
- Gobblegums: three new gums unlocked into the pack builder each season (Phase 2)
- Research XP tokens and weapon XP tokens
- Reticles and hitmarkers
- Calling cards
- One season camo

PREMIUM TRACK · ABOUT 60% OF THE REWARDS

- Season camos (three), including one animated finish
- An operator outfit at tier 25 and the **grand-prize operator** at tier 50
- A HUD theme, a music pack and a map glow set
- Portrait frames and weapon charms (once charms exist)
- Bonus gum unlocks, XP tokens and the credit refund

The pass never hands out power directly. Gums and XP tokens unlock or speed up things you would earn by playing anyway.

Sample tier layout (placeholders)

Tier	Free track	Premium track
1	25 credits	Gobblegum unlock
5	Gobblegum unlock	HUD theme
10	**Season camo 1**	**Season camo 2**
15	Calling card	Map glow set
20	Research XP token	Music pack
25	Gobblegum unlock	**Operator outfit**
30	75 credits	Season camo 3 (animated)
40	Weapon charm	Portrait frame
45	Gobblegum unlock	Weapon XP token
50	100 credits and a calling card	**Grand-prize operator** and the credit refund

Data, rollover and milestones

- **Season data.** `mods/pass/season.json` holds `{id, name, start, end, tiers:[{tier, xp, free:{type,id,amount}, premium:{type,id,amount}}]}`. Each reward is granted through `window.kino.rewards.grant` from Phase 6.
- **Store.** `kino.mods.pass` holds `{season, xp, premium, claimed:{free:[], premium:[]}}`, cloud-synced.
- **Season dates** come from the device clock. A player can change it, which is accepted for a local fork.

1. Season data model, pass XP accrual and the pass store.
   Gate · XP accrues in a match and survives a reload.
2. Reward granting through the registry and claiming on both tracks.
   Gate · A tier claims correctly on both tracks, and the same reward never grants twice.
3. Pass page: tier rail, free and premium rows, Claim all, preview.
   Gate · The page reads correctly on desktop and phone.
4. Buying premium and tier skips with credits.
   Gate · Buying a tier spends credits once and grants both rewards.
5. Challenges feeding pass XP.
   Gate · A completed daily challenge adds pass XP and credits once.
6. Season rollover, toasts and the pause-menu progress line.
   Gate · A season ending archives the track and keeps owned items.
7. Author the first season: 50 tiers, theme and exclusives.
   Gate · Every tier has a granting reward that exists in the game.

Risks

- **Economy.** Earn rate against tier prices is the whole economy. Tune after Phase 6 is live.
- **Dependencies.** The pass can only hand out items that exist, so it needs Phases 2, 4, 5 and 6 first.
- **Season dates.** They rely on the device clock.
- **Phone.** A 50-tier grid needs horizontal scrolling and large touch targets.
- **Content per season.** Each season needs real new camos, a theme and an operator. That is an art cost every cycle, so season length should match what you can make.

Files: new `pass.html`, `pass.js`, `mods/pass/` (`season.json`, `mod.js`), then the main menu, `cloud.js`, the reward registry from Phase 6, plus a new `docs/fork/pass.md`.

REFERENCE

What you can unlock, and where from

Power comes from play. The shop sells looks and sounds. The pass hands out items from both sides but nothing that is power by itself.

Item	Earned by play	Research	Shop	Pass free	Pass premium
POWER AND PROGRESSION					
Weapon attachments and levels per-gun XP, as today	●	–	–	–	–
Gobblegums unlocked into the pack builder	●	–	–	●	●
Perk and ammo mod augments Major and Minor	–	●	–	–	–
Research XP and weapon XP tokens speed, not power	–	–	–	●	●
LOOKS AND SOUNDS					
Prestige camos 3 per gun, work on every gun	●	–	–	–	–
Shop camos patterns, metals, animated finishes	–	–	●	●	●
Operators and outfits	–	–	●	–	●
Reticles, hitmarkers, kill effects	–	–	●	●	●
HUD and menu themes	–	–	●	–	●
Music and sound sets	–	–	●	–	●
Map glow colours box bulbs, Pack-a-Punch, teleporter	–	–	●	–	●
Calling cards and badges prestige badges are earned, cards are sold	○	–	●	●	●
Weapon charms later add-on	○	–	–	○	●
CURRENCY					
Credits the pass refunds part of premium on completion	●	–	–	●	●
Premium pass and tier skips bought with credits	–	–	●	–	–

REFERENCE

Cross-cutting concerns

Eight concerns cut across all seven phases. The fork already has a convention for most of them.

- **Storage.** Each system keeps its own store so one saver cannot overwrite another. The box list goes in the progression profile (`loadout.box`). Everything else gets its own key: `kino.mods.classes` (existing), `kino.mods.gobblegums`, `kino.mods.prestige`, `kino.mods.research`, `kino.mods.credits`, `kino.mods.shop` and `kino.mods.pass`. Add each new key to `TRACKED` in `cloud.js` so it syncs with Discord sign-in.
- **Mod order** in `mods/mods.json`. `weapon-levels` loads before `progression`, then `gobblegums`, `prestige`, `research`, `credits`, `shop` and `pass`, because unlocks read the player level and the pass grants items the earlier mods own.
- **Menu.** The Armory keeps Loadout, Classes and Operator, and gains Gobblegums and Research panes. Shop and Pass are separate top-level pages.
- **Reward registry.** One function, `window.kino.rewards.grant(type, id)`, built in Phase 6, grants every reward type, so the pass, the shop and prestige never duplicate code.
- **Co-op.** The host runs zombies, rounds and power-ups. Gum effects, ammo mod effects and anything that touches enemies run on the host. Packs, hands, augments and cosmetics stay per player, and equipped cosmetics ride in the existing pose and profile messages.
- **Phone.** Every new pane and page needs touch targets. Follow `mobile.md` and add the chew-gum button to the `touch-extras` mod.
- **Testing.** Use the project's existing checks: `npm test`, Node checks for rules and migrations, and headless Sandbox runs for gameplay. Check HUD and menu visuals on the real GPU, since SwiftShader hides artefacts.
- **Docs and upstream merges.** Add each system's detail to its `docs/fork/*.md` file with a one-line entry in `history.md`. New files: `gobblegums.md`, `research.md`, `shop.md`, `pass.md`. List every upstream file you edit in `CLAUDE.md`: `engine.js` (Use-prompt hook, Pack-a-Punch ammo mod hook, game-over payout), `mystery-box.js`, `home.html`, `home.js`, `game-menu.js`, `cloud.js`.

Suggested build order, and what can run in parallel

1. Phase 1 first. It changes the power curve that everything later is balanced against.
2. Phases 2 and 4 are independent of each other and can run in parallel. Phase 3 can move earlier, except for the sidearm passives, which need Phase 1.
3. Phase 5 after the power curve settles, because augments stack on the earlier systems. Build the ammo mods first.
4. Phase 6 once there are cosmetics to sell. Its reward registry is a dependency of Phase 7.
5. Phase 7 last. It needs gums, prestige camos, shop items and credits to exist.

DECISIONS

Open questions

Twenty-three decisions are open. The first three block Phase 1, so answer those first. Tick each one once decided and add the answer beside it. A suggested answer is given where there is one.

PHASE 1 BLOCKS START

- [ ] Does "only pistols" apply to both starting slots, or to the primary only?
  Suggested: Both slots.
- [ ] What is the minimum size of the Mystery Box list? An empty pool stops the box from opening.
  Suggested: 3 guns.
- [ ] In co-op, does a player's own list apply when they pull from the shared box, or only the host's?
  Suggested: The host's list.

PHASE 2

- [ ] What is the pack size, and how many of each gum can the machine give per match? The BO6 and BO7 guides do not say.
- [ ] How do gums unlock: by player level, by round milestones, or as random drops?
- [ ] Keep the BO6/BO7 gum names, or use your own?
- [ ] Where on Kino should the gum machine stand?

PHASE 3

- [ ] Is "the next activation skips its cooldown" the right payoff for the class meter?
- [ ] Keep all four additions, or cut any?

PHASE 4 NEW

- [ ] Does player prestige reset only the level, or the unlocks too?
  Suggested: Level only.
- [ ] Is the Master camo given on entering Prestige Master, or on reaching level 250?
- [ ] Is the max player level 55 like BO7, or the fork's own cap?

PHASE 5 NEW

- [ ] At what player level does research unlock? BO6 uses level 11.
- [ ] How many Major and Minor augments per item: two of each, or three (BO6 has more)?
  Suggested: Two each to start.
- [ ] Which four ammo mods first, and are they applied at Pack-a-Punch?
  Suggested: Cryo Freeze, Dead Wire, Napalm Burst, Brain Rot, chosen at Pack-a-Punch.
- [ ] Do Deep Pockets and Iron Skin get augments too, or only the four drinkable perks?
  Suggested: Only the four perks.

PHASE 6 NEW

- [ ] How are credits earned: match payout, challenges, milestones, prestige, or a mix?
  Suggested: Match payout, challenges and milestones.
- [ ] Which categories go in the first shop?
  Suggested: Camos, reticles and operators.
- [ ] Sell XP boosts, or keep the shop cosmetic-only?
  Suggested: Cosmetic-only.
- [ ] Does the Battle Pass also get its own page, or a tab inside the Shop page?
  Suggested: Its own page.

PHASE 7 NEW

- [ ] What is the season length and tier count?
- [ ] Does finishing the premium pass refund credits?
- [ ] Do pass-exclusive items return to the shop after a season?

REFERENCE

Sources and caveats

Where the design comes from

- **Prestige (Phase 4).** Black Ops 7 weapon prestige: Gfinity, PCGamesN, Insider Gaming, and Activision support.
- **Augments and research (Phase 5).** Black Ops 6 Zombies: Gfinity and esports.gg.
- **Gobblegums (Phase 2).** Activision's BO6 and BO7 guides, as cited in the first version of this roadmap.
- **Battle pass (Phase 7).** Marvel Rivals' free and premium track layout and credit refund are from memory and were not looked up for this document.

Caveats

- The BO7 and BO6 articles are launch-era. Camo counts, tier requirements and unlock levels may have changed in later patches. The Activision support page is the best place to confirm them.
- The augment names, research costs, credit amounts, shop prices and tier layouts in this document are placeholders to be tuned. They show the shape of each system, not final numbers.
- Camos, music, operators and any other art must be the user's own or user-supplied. Third-party models keep their licence and a credit line. Ripped game assets are not published.

Codebase facts used

- Four drinkable perks (`game-data.json` `perkDrinks`) and no ammo mods in the current code.
- Camo painting through `applyCamo` and the six per-gun camos (`docs/fork/weapon-levels.md`).
- Class-tree augments (`docs/fork/classes.md`), the reason for the naming rule in Phase 5.
- Characters, portraits, the HUD and fx mods and the lighting mod's box bulbs (`docs/fork/characters.md`, `gameplay.md`, `lighting.md`).
